Reinforcement would then be delivered upon completion of the first two steps three consecutive times. This procedure continues until the entire behavior chain is complete. Backward Chaining: Using backward chaining, all behaviors identified in the task analysis are initially completed by the trainer, except for the final behavior in the chain ...

The outcome of primary interest for this meta-analysis, aggressive/disruptive behavior, was most frequently measured via teacher report and showed a mean effect size of 0.21 ($p < 0.05$). The results reported in the remainder of this paper pertain only to the effect sizes for these aggressive/disruptive outcomes from the 249 studies that reported them.

1.6.5.1 Textile-reinforced concrete characteristics. TRC [21] consists of a fine-grained cementitious binder and alkali-resistant glass textiles. The significance of prestressing the textile for its better utilization is demonstrated by conducting a tensile test. Based on the advantages realized by prestressing the textile, Refs.

Each response has an equal chance of being reinforced regardless of the number of responses that have preceded it. Variable-interval schedules - reinforcement is given after a randomly distributed length of time. 39. Discuss the five step problem solving model for O.B. Mod. The first step involves the identification of critical behavior.
