Binomial Distribution Examples And Solutions. Example 1: If a coin is tossed 5 times, find the probability of: (a) Exactly 2 heads (b) At least 4 heads.

Solution: (a) The repeated tossing of the coin is an example of a Bernoulli trial. According to the problem: Number of trials: $n=5$.

Where To Download Binomial Distribution Examples And Solutions

Binomial Distribution Overview. The binomial distribution is a two-parameter family of curves. The binomial distribution is used to model the total number of successes in a fixed number of independent trials that have the same probability of success, such as modeling the probability of a given number of heads in ten flips of a fair coin.
