Chapter 9 describes the management of I/O ports and memory buffers that live on the device; after that comes interrupt handling, in Chapter 10. Unfortunately, not everyone is able to run the sample code for these chapters, because some hardware support is actually needed to test the software interface interrupts.

4.3 Process Address Space Descriptor. The process address space is described by the mm\_struct struct meaning that only one exists for each process and is shared between userspace threads. In fact, threads are identified in the task list by finding all task\_structs which have pointers to the same mm\_struct.. A unique mm\_struct is not needed for kernel threads as they will never page fault or ...

Starting with U-boot 2013.10, the kernel and device tree binaries by default are no longer being read from the /boot/ partition on the MMC but from the root file system's boot directory when booting from MMC/EMMC. This would mean you would copy the kernel image and device tree binaries to /media/rootfs/boot instead of /media/boot.
