Color codes are hexadecimal numbers that computers use to represent a color. ATLAS only uses a small set of color codes (compared to the vast number of colors possible), and here is the full list of colors used to define dyes and creature colors in the game. A creature has up to 6 color-regions (numbered 0 to 5). To set region "r" to the creature-color with the id "c", look at the creature and ...

A color model is an abstract mathematical model describing the way colors can be represented as tuples of numbers, typically as three or four values or color components. When this model is associated with a precise description of how the components are to be interpreted (viewing conditions, etc.), the resulting set of colors is called "color space." ...

Yet, there are large racial inequities in San Jose. For example, even with the highest share of Black college graduates of any region (37 percent), there is a 23 percentage point Black-White disparity in terms of educational attainment, and the White-Latinx disparity is 44 percentage points (60 and 16 percent, respectively). And among college graduates, Black and Latinx workers earn \$12-\$17 ...
