In this article. To manage your Azure Databricks service, you need a few different kinds of administrator: A user with the Azure Contributor or Owner role who can view and make changes to your Azure Databricks service, Azure subscription, and diagnostic logging configurations. The person who signed up for or created your Azure Databricks service typically has one of these roles.

Administration guide - Azure Databricks | Microsoft Docs

Every file system being exported to remote users with NFS, as well as the access level for those file systems, are listed in the `/etc/exports` file. When the `nfs` service starts, the `/usr/sbin/exportfs` command launches and reads this file, passes control to `rpc.mountd` (if NFSv3) for the actual mounting process, then to `rpc.nfsd` where the file systems are then available to remote users.
