The Python Language Reference¶ This reference manual describes the syntax and "core semantics" of the language. It is terse, but attempts to be exact and complete. The semantics of non-essential built-in object types and of the built-in functions and modules are described in The Python Standard Library.

The Python Language Reference — Python 3.8.6 documentation
Documenting your Python code is all centered on docstrings. These are built-in strings that, when configured correctly, can help your users and yourself with your project's documentation. Along with docstrings, Python also has the built-in function help() that prints out the objects docstring to the console. Here's a quick example:

Documenting Python Code: A Complete Guide – Real Python
Once you have read a tutorial, you can browse through Python's online documentation. It includes a tutorial that might come in handy, a Library Reference that lists all of the modules that come standard with Python, and the Language Reference for a complete (if rather dry) explanation of Python's syntax.

BeginnersGuide - Python Wiki
It previously enabled universal newlines in text mode, which became the default behaviour in Python 3.0. Refer to the documentation of the newline parameter for further details. Note. Python doesn't depend on the underlying operating system's notion of text files; all the processing is done by Python itself, and is therefore platform ...
