Management Guide:

Recommended seeding rate is usually 5 to 7 pounds per acre for raw seed and 8 to 10 pounds per acre for coated seed. It's a very small seed that requires good seed to soil contact and should be planted at 1/8 to 1/4 inch deep.

## Identification **Missouri Department of ...** Guide Missouri

Many Missouri pastures have adequate grass stands, but they need legumes. If the soil is capable of growing them, legumes should be established in grass sods. Establishing clovers is cheaper than topdressing the grass with nitrogen. Legumes have long been recognized for furnishing nitrogen to a companion grass.
