Welcome to our study with Apologia's Human Anatomy and Physiology. Today, we are on module 4 - the digestive system. We've done some easy, fun digestive system experiments that have taught us more about how parts of the system work together. Related: Lots more experiments, projects, and anatomy and physiology resources I have to admit. The kids had a little more fun studying the digestive ...

Digestive System Experiments - The Homeschool Scientist

Following this study unpublished results by Jespersen et al. have shown the yeast-aflatoxin B 1 complex to be stable during the passage of an in vitro gastrointestinal tract model indicating that the aflatoxin will not be absorbed in the gastrointestinal tract but excreted together with the yeast cells in the human feces.

Beneficial Effects of Probiotic and Food Borne Yeasts on Human Health

Digestive system anatomy (diagram) Gut tube. The primitive gut is formed when a portion of the yolk sac becomes incorporated into the embryo, which occurs due to the cephalocaudal and lateral folding of the embryo. The portions that remain outside the embryo are the yolk sac and the allantois. The primitive gut forms a blind-ended tube on both the cephalic and caudal ends of the embryo, forming ...

Development and embryology of the digestive system - Kenhub

Although the breasts are not classified as organs of the reproductive system, they nonetheless may play an important role in reproduction. The physiological function of the female breast is lactation, or the production of breast milk to feed an infant. This function is illustrated in Figure 18.7.7. Besides nutrients, breast milk provides hormones, antibodies, and other substances that help ...

18.7 Functions of the Female Reproductive System - Human Biology

The nervous system has two main parts: The central nervous system is made up of the brain and spinal cord. The peripheral nervous system is made up of nerves that branch off from the spinal cord and extend to all parts of the body. The nervous system transmits signals between the brain and the rest of the body, including internal organs. In this way, the nervous system's activity controls ...
