Logic for linguists (Chapter 1) - Logic in Linguistics

In generative grammar and related approaches, the logical Form of a linguistic expression is the variant of its syntactic structure which undergoes semantic interpretation. It is distinguished from phonetic form the structure which corresponds to a sentence's pronunciation. These separate representations are postulated in order to explain the ways in which an expression's meaning can be partially independent of its pronunciation, e.g. scope ambiguities. LF is one of the cornerstones of the class
