I. Acute Heart Failure: What every physician needs to know. Acute heart failure (AHF), also known as acute decompensated heart failure or cardiac failure, is not a single disease entity, but rather a syndrome of the worsening of signs and symptoms reflecting an inability of the heart to pump blood at a rate commensurate to the needs of the body at normal filling pressure.

Treatment of Acute Heart Failure - The Cardiology Advisor

Rather, it focuses on practical clinical evaluation and management. Specific objectives and goals include: Describe the clinical significance of bradycardia with respect to mortality, symptoms (eg, syncope, impaired functional capacity), and exacerbations of associated disorders (eg, ischemia, heart failure, provoked tachyarrhythmias).
