A Bingham plastic is a viscoplastic material that behaves as a rigid body at low stresses but flows as a viscous fluid at high stress. It is named after Eugene C. Bingham who proposed its mathematical form.. It is used as a common mathematical model of mud flow in drilling engineering, and in the handling of slurries.A common example is toothpaste, which will not be extruded until a certain ...

For a Newtonian fluid wall, shear stress (τ_w) can be related to shear rate by $\tau_w = \dot{\gamma} \mu$, where μ is the dynamic viscosity of the fluid. For non-Newtonian fluids, there are different constitutive laws depending on the fluid, which relates the stress tensor to the shear rate tensor.
