Gross anatomy. The cerebellum is located in the posterior cranial fossa and lies dorsal to the pons and medulla, from which it is separated by the fourth ventricle. There are 2 major parts to the cerebellum, the cerebellar deep nuclei and the cerebellar cortex.. Output from the cerebellum originates solely in the deep nuclei, where almost all of the neurons of the cerebellum reside.

the mesothelium of the peritoneum. The germinal epithelium gives the ovary a dull gray color as compared with the shining smoothness of the peritoneum; and the transition between the mesothelium of the peritoneum and the cuboidal cells which cover the ovary is usually marked by a line ...

Germinal epithelium (female) - Wikipedia

The lingual tonsils are a collection of lymphatic tissue located in the lamina propria of the root of the tongue. This lymphatic tissue consists of the lymphatic nodules rich in cells of the immune system (immunocytes). The immunocytes initiate the immune response when the lingual tonsils get in contact with invading microorganisms (pathogenic bacteria, viruses or parasites).
