The NAAP Motions of the Sun Lab uses an animated simulator, along with student guide and background information, to enable students to manipulate variables--including time of day, day of year, and observer's latitude--to understand the apparent motion of the sun in the sky.

### **Naap Astronomy Lab Answers**

The sky does an apparent rotation about the celestial axis every sidereal day =  $86164.0905 \text{ s} = 1 \text{ day} - 4 \text{ m} + 4.0905 \text{ s}$  (on average) (which is a little shorter than a metric day =  $24 \text{ h} = 86400 \text{ s}$ ). The celestial axis is just an extension to the celestial sphere of the Earth's axis.
