Ink Bottle Cosmic Black 50 MI The science of colours by ...

Aristotle developed the first known theory of color believing it was sent by God from heaven through celestial rays of light. He suggested that all colors came from white and black (lightness and darkness) and related them to the four elements – water, air, earth, and fire.

The Science of Color - Smithsonian Libraries

Early color science defined the primary colors (or primitive colors, as they called them), as being light and dark or black and white. From these two "colors," all other colors were somehow created. In the early 18th century, Sir Isaac Newton defined seven primary colors: red, orange, yellow, green, blue, indigo and violet.
