EM waves have many properties similar to the waves we experience in everyday life, but the underlying physics of EM waves is profoundly different. Instead of a local disturbance exerting a force on adjoining regions, changing magnetic fields create electric fields (as quantified by Faraday's Law), and changing electric fields create magnetic ...

Introduction. The (two-way) wave equation is a second-order partial differential equation describing standing wave field (superposition of two waves travelling in opposite directions). This article mostly focuses on the scalar wave equation describing waves in scalars by scalar functions $u = u(x_1, x_2, \dots, x_n; t)$ of a time variable t (a variable representing time) and one or more spatial ...

The Draupner wave (or New Year's wave) was the first rogue wave to be detected by a measuring instrument.The wave was recorded in 1995 at Unit E of the Draupner platform, a gas pipeline support complex located in the North Sea about 160 kilometres (100 mi) southwest from the southern tip of Norway.. The rig was built to withstand a calculated 1-in-10,000-years wave with a predicted height of ...

Then in 2008 he designed the A (119 meters long), a discreet and ecological vessel, inspired by the rhythm of the waves and the shape of a fish, it has an immense and revolutionary bow: "I designed one of the first hulls that doesn't make any waves, even at 25 knots," reminisces Philippe Starck.

An anti-reflective coating developed by Nikon that virtually eliminates internal lens element reflections across a wide range of wavelengths. Nano Crystal Coat uses ultrafine, nano-sized* crystal particles to eliminate reflections inside the lens throughout the spectrum of visible light waves (380 to 780 nm) in ways that far exceed the limits of conventional antireflection coating systems.
